

At an Aquarium, Chapter 2

There are many, many fish. Fish can be little or big. Fish have	13
gills and fins. See if you can see fins on the sides of the fish.	28
Fish like to swim up and down. They have gills. They have	40
fins. But they do not look the same as other fish. They do not	54
swim well. They can be very little or big. They are long and do	68
not have legs. They like to hide. They eat things like fish and	81
crabs. Some sharks are very little, but many are big. They	92
	
have lots of teeth. When one comes out, one fills the gap.	104
	
They are flat. They hide in the sand and look for food. They	117
eat things like shrimp, crabs, and clams. You can give them	128
some food to eat. Put the food down so they can come get it.	142
They come and get the food. Here are some other fish. How	154
many do you see? Five or six? Nine or ten? Do you see a	168
white fish? Do you see fish that look the same?	178
